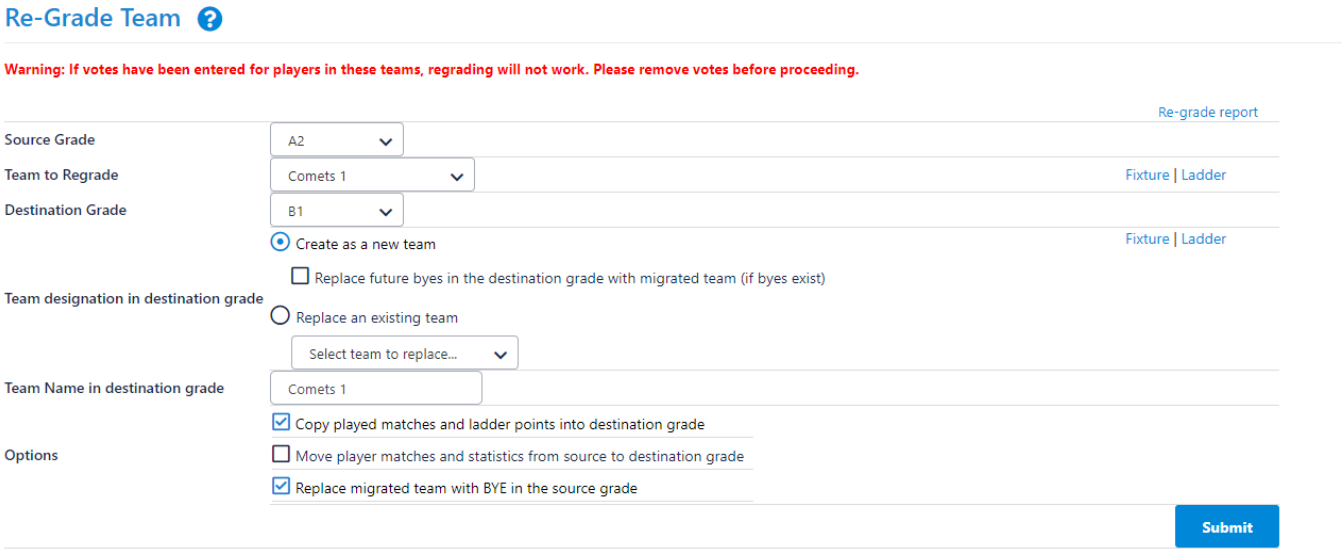
Re-grade Team

Re-grading a team occurs during a current season and allows a team to be up-/down-graded to a different division once matches have been played. Where required, the migration of squad lists, match data and ladder points is facilitated.

Typically this occurs in competitions that allow re-grading to occur if a team is winning or losing a large percentage of their matches.



1. Start by selecting the **Source Grade, Team to Regrade** and **Destination Grade**.
2. Complete the re-grade team options as per the table below.
3. Click **Submit** and **OK** to save your changes.

> It is crucial to review target team & associated grade thoroughly before clicking **Submit** as it is more complicated to reverse the action & requires manual manipulation

4. It is recommended that you review the newly re-graded team, including:

    - Checking the fixtures of both source & destination grade.
    - Checking the ladder display of both source & destination grade.
    - Checking the Team settings in Grade manager page.
    - Rerunning the draw creator wizard.

Regrade options	Descriptions
Create as a new team in destination grade	• Adds the team to the destination grade. • Should be used if no bye or no team available for swapping grades in the upcoming matches. • Need to restart draw creator wizard to reflect the team change in fixture. • Seeding for teams will be auto adjusted in both destination & source grade.
Replace future byes (if any) in destination grade with migrated team	• Slots migrated team in upcoming bye matches in destination grade. • May not need to re-run draw creator. • Perfect if a bye is available for the upcoming matches. • Seeding for teams will be auto adjusted in source grade.
Replace an existing team in destination grade	• This will remove a specified team from any future matches in the fixture of the Destination Grade and replace it with the Migrated Team. • May not need to re-run draw creator. • Perfect in case moving out team is available for the upcoming matches. • Seeding for teams will be auto adjusted in source grade.

Copy played matches & ladder points into destination grade	• A copy of matches played by the migrated team will be created in the fixture of the Destination Grade (shown in red in Season Fixture). These are used for ladder calculations. • This helps to recalculate ladder points for destination grade including match played by migrated team. • There might be a missing or surplus of matches played in case the timing of two grades involved is different ie. team may play more or less matches than those in destination grade. • This will at the same time hide the team from source grade's ladder display. • Seeding for teams will be auto adjusted in both destination & source grade.
Replace migrated team with Bye in the source grade	The fixture in the source grade will be updated with the Migrated team being replaced with a BYE in future matches. Any matches that would result in 'BYE v BYE' will be deleted.
